

Innova 5 & 15

The Eole Innova comes in three versions, 5 and 15 pair boot versions plus a 14 helmet version.

The Innova is a dryer and disinfector for either boots or helmets. They use heated air that is ionised and enriched with Ozone to kill the bacteria that carry disease and make boots smell. There is also an optional air freshener cartridge to make the room smell nicer before the ozone has had chance to work

They are wall mounted but can be floor standing using the optional stand

Eole Club

The Eole Club is a 4 pair boot dryer.

It uses warmed air and has a clockwork timer to turn the machine off. The Eole Club is wall mounted only
