

# WINTERSTEIGER

Thinking about tomorrow.

## Base Grinding

The Sigma B is the basic sanding machine from Wintersteiger.

It comes in four versions, using the basic machine, edge sanding and autofeed modules to make up the range.

The machine can grind skis & snowboards quickly and easily giving the best sanded finish possible.

The SBI is a Stone & Belt Inline machine giving the pre-grinding advantages of the belt with the superb finishing of stone grinding, and has a edge grinding module as an option.

Both the stone & belt are 350mm wide making this machine ideally suited to a shop that wants one machine for grinding skis & boards to the highest standard.

The RS 350 and RS 200 offer the best finish available in the UK with arrow-head and sign-wave centred racing structures, speed & pressure compensation autofeed and self centering feed system.

This is the machine to aspire to for most shops and gives superlative results time after time.

The Discovery range of automated machines are the most popular in the world with over 250 sold in the last 2 years!

These machines have a high capacity and are ideally suited to large rental operations or workshops with a very high throughput
